

ADVANCED DENTAL INSTITUTE (ADI) PRF AESTHETICS & INJECTION TRAINING

EXCLUSIVE TRAINING USING DR. CHOUKROUN'S PRF - THE INVENTOR OF PRF

The Advanced Dental Institute delivers the only U.S.-based training program utilizing the official materials and protocols developed by Dr. Joseph Choukroun – the inventor of PRF. Dr. Choukroun's system is the result of more than two decades of clinical research, designed to optimize PRF quality, consistency, and clinical performance. No other aesthetics training program in the United States provides direct access to Dr. Choukroun's validated methodology, giving clinicians a distinct advantage in both technique and outcomes. Independent third-party studies have proven that Dr. Choukroun's protocols produce the highest concentrations of platelets, stem cells, and growth factors, key factors in regenerative success. While many programs attempt to replicate i-PRF+, they often rely on modified materials or non-standardized protocols. Enroll today to learn how to establish a higher clinical standard and deliver more consistent, high-quality PRF outcomes for your patients.

ADVANCED i-PRF+ TRAINING FOR AESTHETICS & SOFT TISSUE REGENERATION

The ADI's 30 CEU comprehensive program is designed for dentists, hygienists, and aesthetics providers. The program taught by the ADI teaches biologically driven facial aesthetics, ensuring that you use the most optimized materials and protocols possible. The course provides detailed instruction on i-PRF+, including blood collection, centrifugation protocols, handling, and injection techniques. Clinical applications include facial esthetics, bio-filler injections, skin rejuvenation, hair restoration, and TMJ-related therapies. The program also includes both therapeutic (TMD) and aesthetic Botox, along with dermal filler education, ensuring clinicians understand how to integrate regenerative treatments alongside conventional modalities based on patient presentation and treatment goals. The education provided by the ADI is practical and comprehensive, allowing clinicians to walk away with the knowledge needed to know when and how PRF can be used in conjunction or as an alternative to traditional regenerative materials and protocols.

REPLACE PRP AND SYNTHETIC FILLERS WITH NATURAL PRF AND BIO-FILLERS

A central focus of the ADI's training program is the replacement of traditional PRP and synthetic filler protocols and materials with advanced i-PRF+ methodologies. Clinicians currently using PRP will learn how to transition to PRF, which is more biologically active, more cost-efficient, and designed to reduce inflammation rather than contribute to it. Because i-PRF+ is fully autologous, it offers superior biocompatibility and improved tissue integration. Participants will learn to prepare i-PRF+ and convert it into a PRF gel for use as a natural volumizing bio-filler. This allows clinicians to eliminate the reliance on outdated PRP and synthetic fillers while still understanding when conventional treatments such as Botox are appropriate. The result is a more efficient regenerative approach to aesthetics with significantly lower material costs and improved patient outcomes.

HANDS-ON TRAINING, ACCREDITATION, AND ENROLLMENT DETAILS

Attendance is limited to 12 participants to ensure individualized instruction. Didactic training is provided in advance, allowing for two full days of live patient procedures with direct instructor guidance. Each attendee receives hands-on experience with Botox, dermal fillers, and i-PRF+ plasma. The program is individually dental board approved, PACE/AGD recognized, and provides 30 CEU hours covering therapeutic Botox (TMD), aesthetic Botox, dermal fillers, and regenerative PRF applications. Sign up today to set your path towards providing your patients with the most advanced aesthetics protocols and materials available.

Limited-time incentives include special course pricing for DDS and RDH, installment payment options, and exclusive PRF product discounts with registration. Receive lifetime discounts on Dr. Choukroun's PRF system and materials, locking down exclusive pricing simply by signing up for this program.
